Recuva Professional 1.53.1087 - SeuPirate Serial Code A: The problem is most likely due to Either an error in your system files Or possibly Your Windows installation is too old (see here). A: It could be that you had too much software installed at once. When a program suddenly (and without any warning) stops working, the cause might be that there are too many packages or files installed at once. It could be that the software is corrupted or that an incompatible package or file caused a file corruption. It can also happen that a software is a virus. So you should try removing all unneeded programs to make sure your system is in good shape. Make sure that there are no failed or unauthorized installations before uninstalling the old software You can do this from the Control Panel or the Windows XP Start menu. If you want to check all installed programs, you can use the Windows XP Uninstall Manager, Right-click the installed software that you want to remove, Select Uninstall, Then select the desired option: All, Unused, Unauthorized, etc. You can see the current and removed installed programs by using the Windows XP Add/Remove Programs. This step will also remove all unnecessary files as a backup measure. If the install or uninstall program Fails or Cannot be opened then you can use a system repair tool, such as a Windows XP Install Tool or Windows XP Repair Tool to make sure that the computer system is in good order and that the operating system settings are in
